

link MarineDocs

<https://github.com/omarine12/MarineDocs>

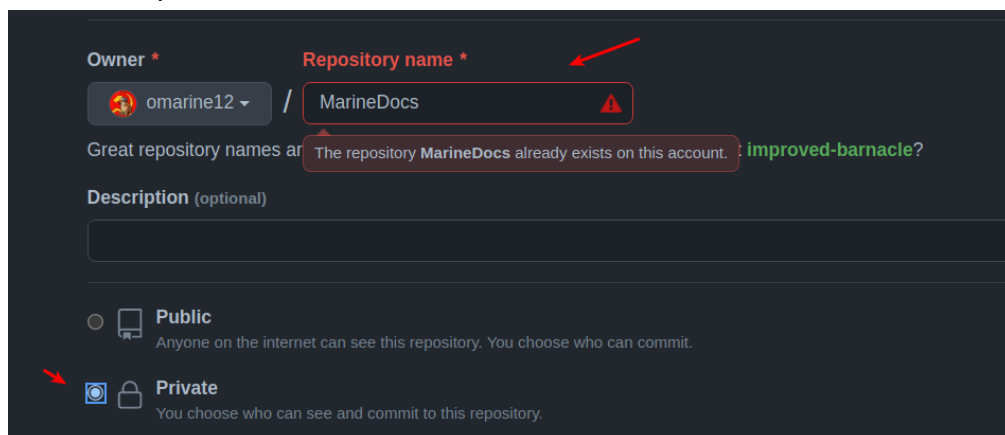

Primer creo un projecte nou

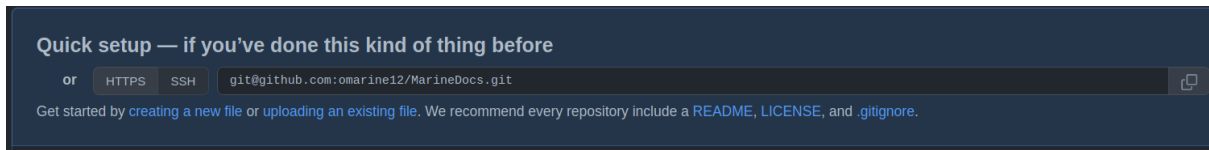

Li dono click a new per a crear un nou repositori

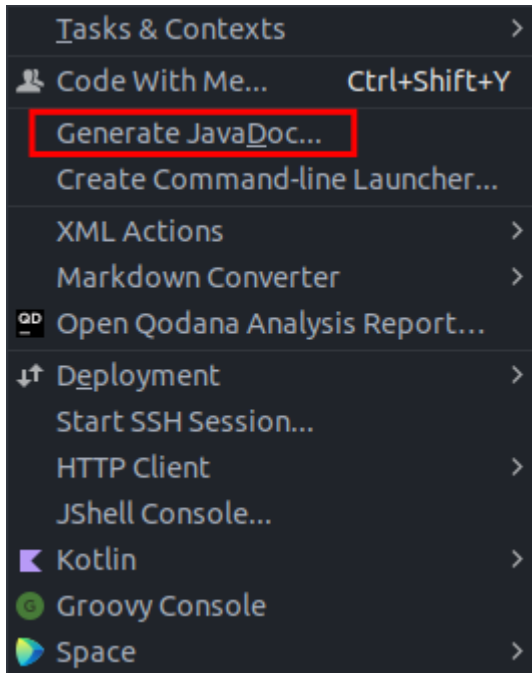

El fico amb privat i el nom MarineDocs

Copio l'enllaç https del repositori

Al projecte creo un nou java doc

Li fico un desti i el genero

Generate JavaDoc

JavaDoc Scope

Whole project

Uncommitted files

Custom scope:

All Places

Include test sources

JavaDoc Options

Include JDK and library sources in -sourcepath

Link to JDK documentation (use -link option)

Output directory:

Visibility level:

protected

Generate hierarchy tree

Generate navigation bar

Generate index

Separate index per letter

@use

@author

@version

@deprecated

Deprecated list

Locale:

Command line arguments:

Maximum heap size:

megabytes

Open generated documentation in browser

org.example											

GIT

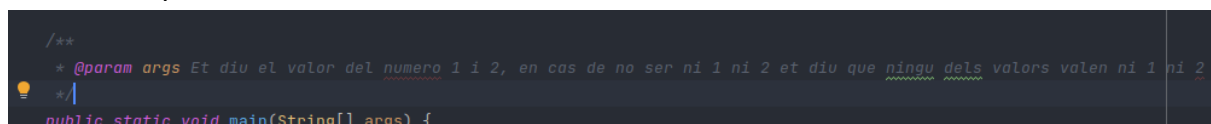

Li dono click dret a la classe i afegeixo un JavaDoc

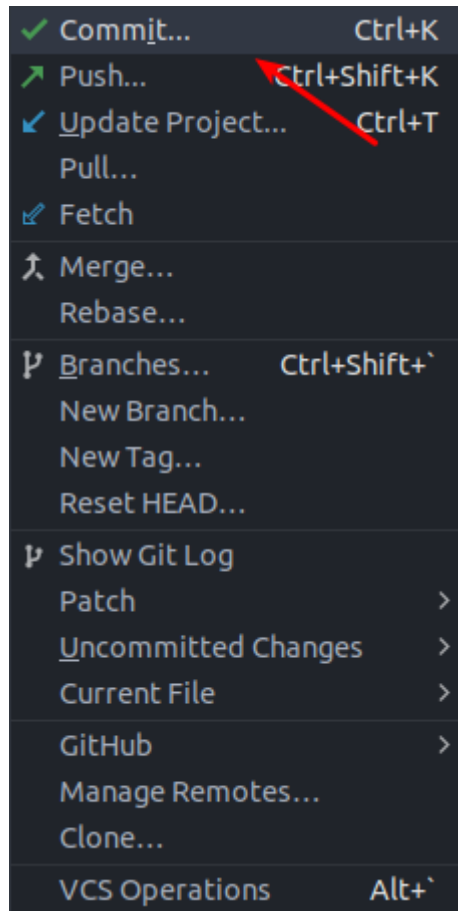

Autorizto el permis a github

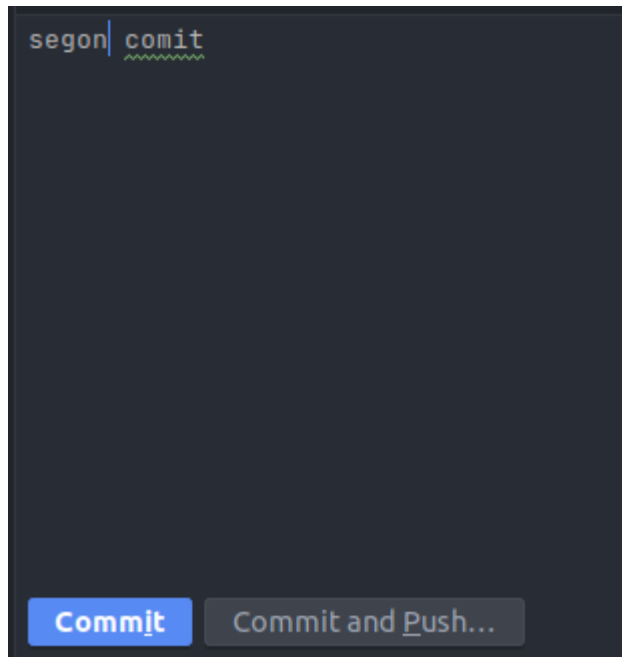

Comento el petit codi

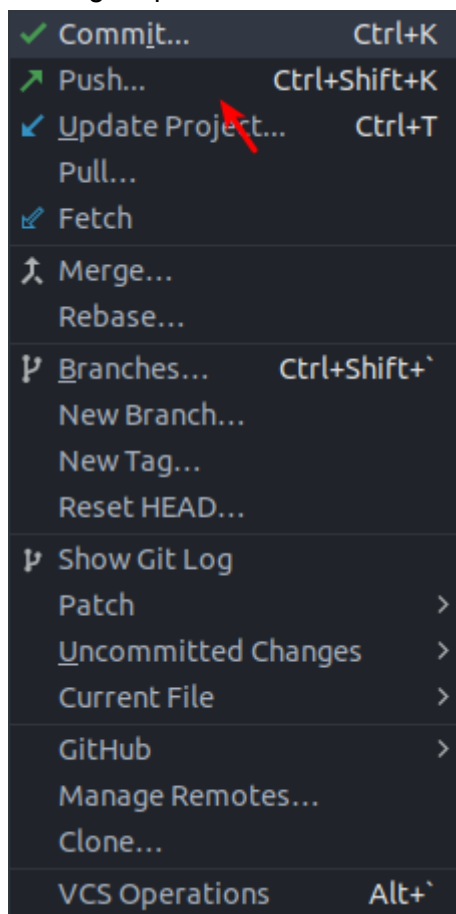

Faig un commit del codi

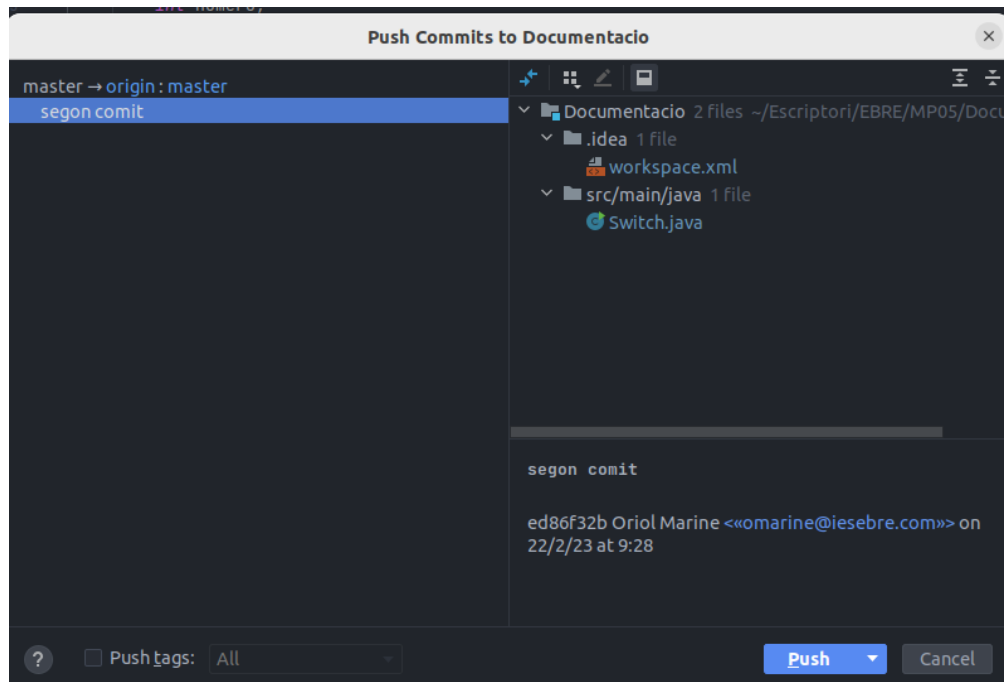

Escric el missatge i confirmo el commit

Ara faig un push

Elegeixo el commit que vull pujar

Un cop fet això s'actualitzara el JavaDocs i es penjara el projecte
